Do you all already know this? If not, pass up as needed.

U.S. lawmakers probe EPA staff over possible bias in herbicide review

U.S. lawmakers are investigating whether U.S. Environmental Protection Agency staff influenced the World Health Organization's review of glyphosate and its finding that the herbicide probably causes cancer, according to a letter sent to the agency on Tuesday. The letter from the U.S. House of Representatives Committee on Science, Space and Technology is part of an ongoing investigation into the agency after the EPA posted and withdrew an internal report that said glyphosate was not cancer causing.
